

EXCAVATOR™

CROP RESIDUE BREAKDOWN
& NUTRIENT RELEASE AID

PUT YOUR NUTRIENTS TO WORK NOW FASTER PLANTING FASTER EMERGENCE LESS SKIPS

DESIGNED FOR PLANTER SPEED & EFFICIENCY
EXCAVATOR™ speeds up the breakdown of crop residue—creating the ideal environment for today's high speed planters. The microbes and high-carbon formulation of EXCAVATOR™ demolishes residue so consistent planting depth and seed spacing can be achieved.

IMPROVE STAND COUNTS IN REDUCED-TILLAGE
By not having residue pinned in the furrow, soil to seed contact will be improved, giving every seed the best chance for even emergence.

BRINGS FIELD-AVAILABLE NUTRIENTS TO YOUR CROP
The high carbon source and blend of 6 proprietary microbes in EXCAVATOR™ stimulate and fortify biological activity, releasing field-available nutrients from crop residue. Initial data indicates increases of up to 30-40 lbs N, 5-10 lbs P and 35-40 lb K in the crop following EXCAVATOR™ application.

DIRECTIONS FOR USE
In reduced-till scenarios, apply post-harvest on all crop residues. Specific timing for optimal use varies based on tillage practices, fertility levels and other factors.

RECOMMENDED USE RATE
Apply 12.8 oz /acre with a minimum 10 gal water.

For best results, include UAN in total solution.

Highly compatible tank mix partner with most herbicide and fertility programs.

Available in both 2.5 gallon jugs and 250 gallon totes.
